

A position is available for a researcher with experience of analysing high throughput genomic data and software programming skills.

The successful candidate will have, or be near completion of, a PhD or master degree in Bioinformatics, Computational Biology, or a related discipline.

The post holder will be responsible for the development of scientific methodologies and IT solutions for the analysis and interpretation of high-throughput genomic data. The project is focused on hereditary diseases leading to defects in blood brain barrier and hemorrhagic stroke.

Salary will be awarded depending on experience

Appointment will be for 2 years in the first instance
