

Postdoc in Cell Biology/Molecular Oncology

Collavin group

Laboratorio Nazionale CIB (LNCIB),
AREA Science Park, Padriciano 99
34149 Trieste, Italy

A position is available immediately in the lab of dr. Licio Collavin at LNCIB in Trieste.

The lab is interested in the molecular basis of cancer progression and aggressiveness. The successful applicant will be involved in a project focused on the functional impact of p53 mutation in the response of cancer cells to inflammatory cytokines. The project involves molecular biology, biochemistry and tissue culture, as well as *in silico* analysis of datasets from large-scale cancer studies.

The ideal candidate is a recent PhD graduate with a background in cell biology and/or immunology and/or bioinformatics. Highly motivated applicants with different academic or scientific background will also be considered.

Please send a CV (with contact information of two references) and a description of your research background and interests to:

Licio Collavin
